INTRODUCTION TO LINUX

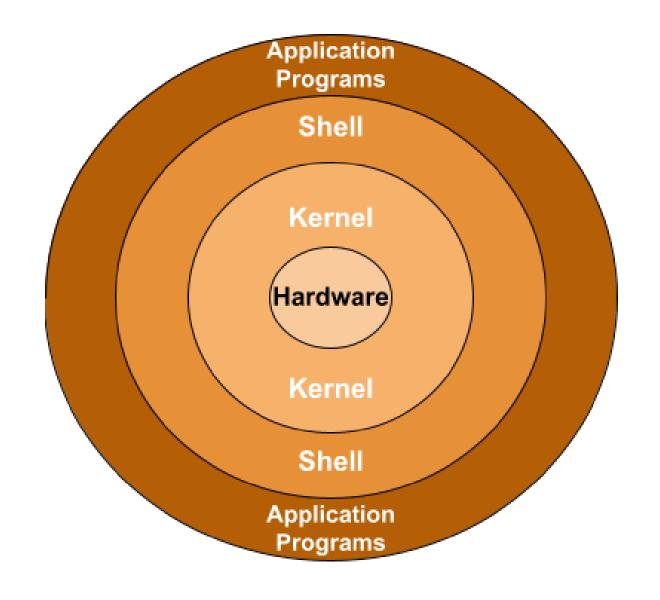

WHAT IS LINUX?

- Linux is a family of open-source,
 UNIX-like Operating Systems.
- Technically, "Linux" refers to the kernel.
- Multiple distributions are built around the Linux kernel: Ubuntu, Fedora, Arch, Debian, etc.

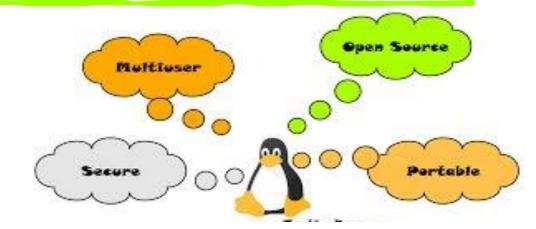

STRUCTURE OF A LINUX OS

- Hardware: Physical components (CPU, Memory, I/O Devices)
- Kernel: Core of OS (Manages memory, processes, files, devices)
- Shell: Interface between user & kernel (e.g., bash, zsh)
- Applications: Software tools (e.g., browsers, editors, players)

FEATURES

- Portable: Runs on any hardware
- Open Source: Free and communitydriven
- Multi-user & Multiprogramming
- **Secure**: Regular updates, fewer vulnerabilities
- Hierarchical File System

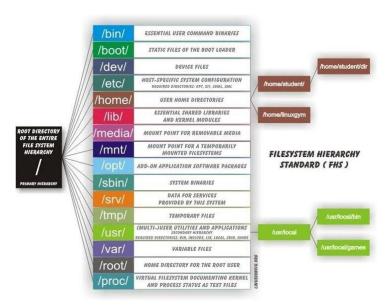

BOOTING PROCESS

- BIOS/UEFI Initialization
- Bootloader Execution (GRUB, etc.)
- Kernel Initialization
- Initramfs Loads
- System Initialization (systemd/init)
- Runlevel/Target Execution
- User Login & Shell Access

FILE SYSYTEM HIERARCHY

- /: Root directory: The main directory of the OS
- /bin: Essential binaries
- /etc: Config files
- /home: User directories
- /var: Variable data
- /usr, /tmp, /mnt, /media and more

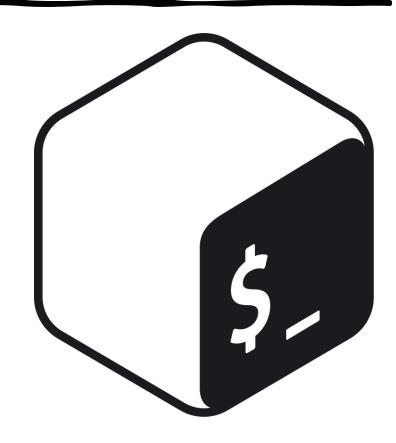

GUI IN LINUX

- Window Managers: i3wm, dwm, hyprland
- Desktop
 Environments:
 GNOME, KDE, XFCE,
 MATE
- Lightweight GUI vs full
 GUI experience

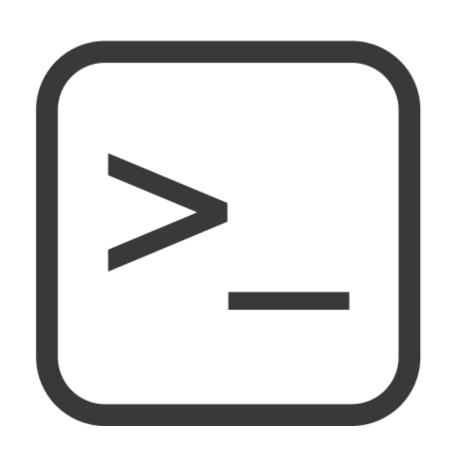

BASIC LINUX COMMANDS

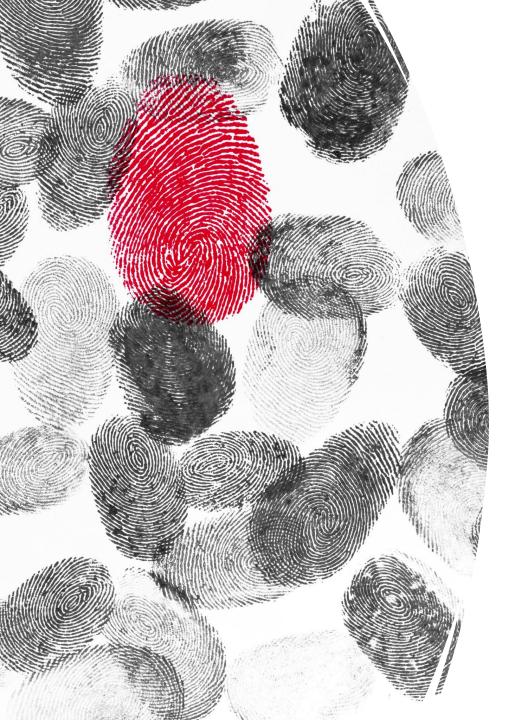

- whoami: Current user
- **pwd**: Print working directory
- 1s, 1s -a, 1s -1: List directory contents
- **cd**: Change directory
- mkdir, rmdir: Make/remove directories
- touch: Create empty files
- cat: Display file content
- echo: Output text
- man: Command manual
- uname: System info
- **cp**, **mv**: Copy/move/rename files
- rm, rm -rf: Delete files/directories

REDIRECTION, APPENDING & PIPELINING

- >: Redirect output (overwrite)
- >>: Append output
- I : Pipe output to next command

QUSTIONS?
